# **Introduction**

The Hotel Booking System is a web-based solution designed to automate and streamline the process of searching, reserving, and managing hotel rooms for both customers and hotel staff. This document describes the functional and non-functional requirements of the system, outlining how it replaces traditional manual methods such as phone calls and in-person bookings with a faster, secure, and user-friendly digital platform.

## **Purpose**

The purpose of the Hotel Booking Management System is to provide a streamlined, efficient, and user-friendly platform that automates the entire hotel reservation process for both customers and hotel staff. The system enables customers to easily search for rooms, make secure bookings, complete online payments, and manage their reservations without manual assistance. For hotel administrators, it offers tools to manage room availability, update room details, track bookings, and handle customer interactions.

## **Scope**

The Hotel Booking System is a web-based application that enables customers to search for available hotel rooms based on location, date, and preferences, make secure reservations, and manage their bookings. It includes features such as user registration, booking management, payment processing, and customer reviews. For hotel staff, it provides an administrative panel to manage room availability, bookings, and customer interactions. The system aims to reduce manual work, enhance operational efficiency, and improve customer experience. It excludes features like flight bookings, event management, multi-language support, and integration with external hotel chains..

# **Overall description**

## **Product perspective**

The Hotel Booking System is a new web application designed to replace inefficient manual booking processes (e.g., phone calls, emails, or in-person reservations). It is not part of an existing product line but is built to serve both small boutique hotels and potentially scalable to larger chains in future iterations.

## **Operating environment**

- **OE-1:** The system shall operate correctly on the following web browsers: Microsoft Edge (latest version), Firefox (latest version), Google Chrome (latest version), and Safari (latest version).
- - **OE-2:** The system shall be accessible on devices including desktops, tablets, and smartphones with a minimum screen resolution of 320x480 pixels.

- **OE-3:** The system shall be hosted on a cloud server with Node.js (version 16.x or later) and My SQL (version 8.0 or later) as the database management system.
- **OE-4:** The system requires a stable internet connection with a minimum speed of 5 Mbps for

## **Design and implementation constraints**

- **CO-1:** The system shall use MySQL (version 8.0) as the database engine to leverage its robustness and compatibility with the project's technology stack.
- **CO-2:** The front-end shall be developed using React.js (version 18.2) to ensure a responsive and modular user interface.
- **CO-3:** The back-end shall be developed using Node.js (version 16.x) to support scalable and efficient server-side operations.
- **CO-4:** Payment processing shall integrate with Stripe and PayPal APIs to ensure secure and reliable transactions.

*CO-1: The system shall use the current corporate standard Oracle database engine*

## **Requirement identifying technique**

The requirements for the Hotel Booking System are identified using the Use Case technique, suitable for interactive end-user applications. This approach captures user interactions with the system to derive functional requirements.

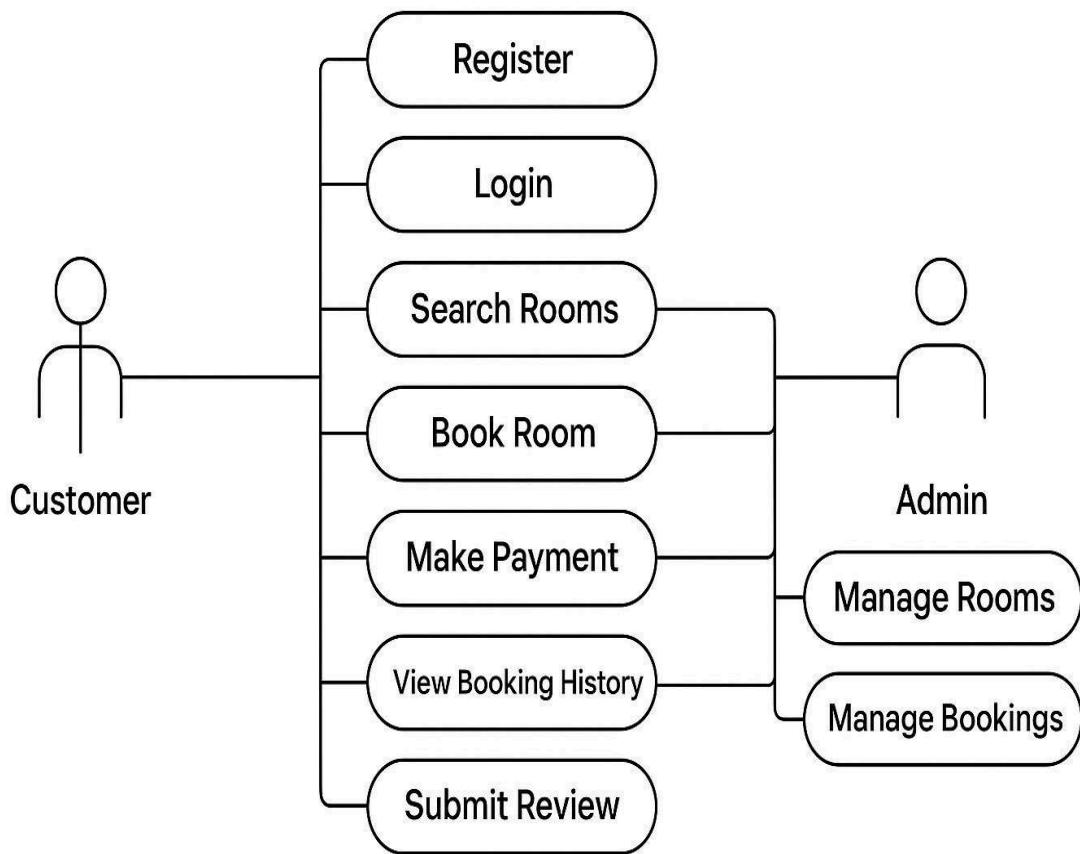

### **Use case diagram**

A use case diagram will be created using MS Visio to represent the interactions between actors (Customer, Admin) and the system. Key use cases include:

- Customer: Register, Login, Search Rooms, Book Room, Make Payment, View Booking History, Submit Review.
- Admin: Manage Rooms, Manage Bookings, View Reports.

*(Note: The diagram is to be created in MS Visio as per the project requirements and is not included in this text-based SRS.)*

# Hotel Booking System

## Use case description

Below is a detailed use case for booking a room, following the provided template.

**Table 5 Show the detail use case template**

## **Feature1: User Registration**

<b>Field</b>	<b>Description</b>
<b>Use Case ID</b>	UC-1
<b>Use Case Name</b>	User Registration
<b>Actors</b>	Customer
<b>Description</b>	Customer creates an account by providing email, password, and personal details.
<b>Trigger</b>	Customer clicks “Register”.
<b>Preconditions</b>	None
<b>Post conditions</b>	Account is created and stored; user can log in.
<b>Normal Flow</b>	1. Customer opens registration form. 2. Enters name, email, password, phone. 3. System validates input. 4. System checks if email is unique. 5. System creates user account. 6. Customer receives welcome email.
<b>Exceptions</b>	<b>E1:</b> Email already exists → System shows error. <b>E2:</b> Weak password → System shows rules.
<b>Business Rules</b>	BR-4: Email must be unique.
<b>Assumptions</b>	Users will enter correct personal details.

## **Feature2: Login**

<b>Field</b>	<b>Description</b>
<b>Use Case ID</b>	UC-2
<b>Use Case Name</b>	Login

<b>Actors</b>	Customer, Admin
<b>Description</b>	User enters login credentials to access the system.
<b>Trigger</b>	User clicks “Login”.
<b>Preconditions</b>	User must be registered.
<b>Post conditions</b>	User session begins; dashboard loads.
<b>Normal Flow</b>	1. User enters email and password. 2. System verifies credentials. 3. System logs in user. 4. User is redirected to dashboard.
<b>Exceptions</b>	Invalid credentials → System shows error.
<b>Assumptions</b>	User remembers password.

### Feature3: Search Room

<b>Field</b>	<b>Description</b>
<b>Use Case ID</b>	UC-3
<b>Use Case Name</b>	Search Rooms
<b>Actors</b>	Customer
<b>Description</b>	Customer searches rooms using location, dates, and preferences.
<b>Trigger</b>	Customer enters search filters.
<b>Preconditions</b>	User must be logged in.
<b>Post conditions</b>	System displays available rooms.
<b>Normal Flow</b>	1. User enters city, dates, room type, guests. 2. System checks availability. 3. System displays rooms with details.
<b>Exceptions</b>	No rooms available → System shows “No results”.
<b>Business Rules</b>	BR-1: Only available rooms should be shown.
<b>Assumptions</b>	Dates entered are valid.

#### **Feature4: Book Room**

<b>Field</b>	<b>Description</b>
<b>Use Case ID</b>	UC-4
<b>Use Case Name</b>	Book Room
<b>Actors</b>	Customer
<b>Description</b>	Customer books a hotel room by selecting dates, number of guests, and confirming payment.
<b>Trigger</b>	Customer clicks “Book Now”.
<b>Preconditions</b>	User is logged in, room is available for selected dates.
<b>Post conditions</b>	Booking is stored in the system and confirmation is shown to the customer.
<b>Normal Flow</b>	1. User selects room. 2. Chooses dates & guests. 3. System calculates charges. 4. User confirms booking. 5. System saves booking.
<b>Exceptions</b>	Room unavailable → System shows error. Invalid payment → Booking not completed.
<b>Business Rules</b>	BR-1: Booking requires valid dates. BR-2: Room cannot be double-booked.

## Feature5: Payment Processing

<b>Field</b>	<b>Description</b>
<b>Use Case ID</b>	UC-5
<b>Use Case Name</b>	Payment Processing
<b>Actors</b>	Customer, Payment Gateway
<b>Description</b>	System processes payment using Stripe or PayPal.
<b>Trigger</b>	Customer clicks “Pay Now”.
<b>Preconditions</b>	Room selected; customer logged in.
<b>Post conditions</b>	Booking is confirmed; payment recorded.
<b>Normal Flow</b>	1. Customer selects payment method. 2. System redirects to Gateway. 3. Gateway validates details. 4. Payment successful. 5. System confirms booking.
<b>Exceptions</b>	Payment fails → System prompts retry.
<b>Business Rules</b>	BR-2: Payment must be completed within 15 minutes.
<b>Assumptions</b>	Payment gateway is available.

## **Feature6: Submit Review**

<b>Field</b>	<b>Description</b>
<b>Use Case ID</b>	UC-6
<b>Use Case Name</b>	Submit Review
<b>Actors</b>	Customer
<b>Description</b>	Customer submits a review after completing a stay.
<b>Trigger</b>	Customer clicks “Add Review”.
<b>Preconditions</b>	Booking checkout date has passed.
<b>Post conditions</b>	Review stored in system.
<b>Normal Flow</b>	1. User selects completed booking. 2. Enters rating & comments. 3. System saves review.
<b>Exceptions</b>	Attempt before checkout date → System blocks submission.
<b>Business Rules</b>	BR-5: Reviews only allowed after checkout.

# Functional Requirements

This section describes the functional requirements of the system expressed in natural language style, organized by feature.

## Functional Requirement 1:User Registration

<b>Identifier</b>	FR-1
<b>Title</b>	User Registration
<b>Requirement</b>	The Customer shall be able to register by providing their email, password, and personal details (name, phone number).
<b>Source</b>	Project Scope Document - Module 1: User Authentication and Profile Management
<b>Rationale</b>	Allows users to create accounts for booking rooms and managing their reservations securely.
<b>Business Rule(if required)</b>	BR-4. Email addresses must be unique for each user.
<b>Dependencies</b>	None
<b>Priority</b>	High

## Functional Requirement 2: Room Search

<b>Identifier</b>	FR-2
<b>Title</b>	Room Search
<b>Requirement</b>	The Customer shall be able to search for available rooms by specifying location, dates, and preferences (e.g., room type, number of guests).
<b>Source</b>	Project Scope Document - Module 2: Room Search and Booking
<b>Rationale</b>	Enables users to find rooms that match their requirements efficiently.
<b>Business Rule(if required)</b>	BR-1. Bookings can only be made for available rooms on the selected dates.
<b>Dependencies</b>	FR-1 (User must be logged in to search for rooms)
<b>Priority</b>	High

## Functional Requirement 3: Payment Processing

<b>Identifier</b>	FR-3
<b>Title</b>	Payment Processing
<b>Requirement</b>	When the Customer confirms a booking, the system shall process the payment securely using Stripe or PayPal.
<b>Source</b>	Project Scope Document - Module 3: Payment Gateway Integration
<b>Rationale</b>	Ensures secure and convenient payment transactions for room bookings.
<b>Business Rule(if required)</b>	BR-2. Payment must be completed within 15 minutes, or the room reservation will be released.
<b>Dependencies</b>	FR-2 (Room must be selected before payment)
<b>Priority</b>	High

## Functional Requirement 4: Admin Room Management

<b>Identifier</b>	FR-4
<b>Title</b>	Admin Room Management
<b>Requirement</b>	The Admin shall be able to add, update, or remove room details (e.g., availability, price, type) in the system.
<b>Source</b>	Project Scope Document - Module 4: Booking Management (Admin Panel)
<b>Rationale</b>	Allows hotel staff to manage room inventory and ensure accurate availability for customers.
<b>Business Rule(if required)</b>	None
<b>Dependencies</b>	None
<b>Priority</b>	High

## Functional Requirement 5:Customer Feedback

<b>Identifier</b>	FR-5
<b>Title</b>	Customer Feedback
<b>Requirement</b>	The Customer shall be able to leave a review and rating for their stay after completing a booking.
<b>Source</b>	Project Scope Document - Module 5: Customer Feedback and Reviews
<b>Rationale</b>	Enables customers to provide feedback, helping hotels improve service quality.
<b>Business Rule(if required)</b>	BR-5. Reviews can only be submitted after the booking's check-out date.
<b>Dependencies</b>	FR-3 (Booking must be completed to leave a review)
<b>Priority</b>	Medium

## Non-Functional Requirements

### Usability

- **USE-1:** The system shall allow Customers to complete a room search and booking with no more than 5 interactions (clicks or inputs).
- **USE-2:** The interface shall be intuitive, with tooltips for all major actions to assist first-time users

## Performance

- **PER-1:** 95% of room search queries shall return results within 3 seconds over a 5 Mbps or faster internet connection.
- **PER-2:** The system shall handle up to 100 concurrent users without performance degradation.
